# WEB ABL TASKS – Documentation

This document explains the HTML and CSS used in the three WEB ABL tasks. The source-code sections are replaced with easy English explanations. The original output screenshots are kept below the related tasks.

## TASK 1: Movie Website

### 1. Aim

The aim is to create a simple movie website using HTML and CSS. The website displays movie names, posters, genres, release years, cast, ratings, and short story descriptions.

### 2. Source Code Explanation

#### HTML Code Explanation

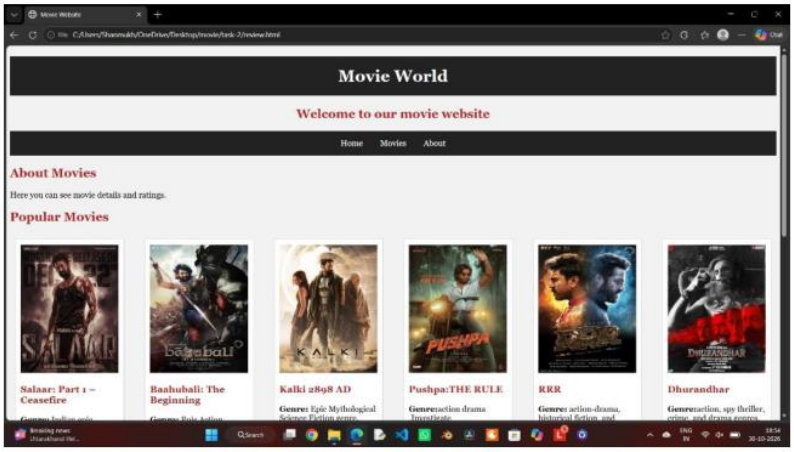

- The HTML5 declaration tells the browser that the page uses HTML5.
- The head section contains the title and connects the HTML file to the CSS file.
- The body contains the visible content of the webpage.
- The main heading displays Movie World and a welcome message is shown below it.
- The navigation bar contains Home, Movies, and About links. Anchor elements are used to move to page sections.
- The Popular Movies section contains separate movie blocks. Each block has a poster, movie name, genre, release year, cast, rating, and synopsis.
- The img element displays movie posters. The src attribute gives the image file name and alt gives alternative text.
- The h3 element is used for movie names. Paragraph elements are used for movie information.
- The About Us section gives a short description and the footer displays the website name and year.

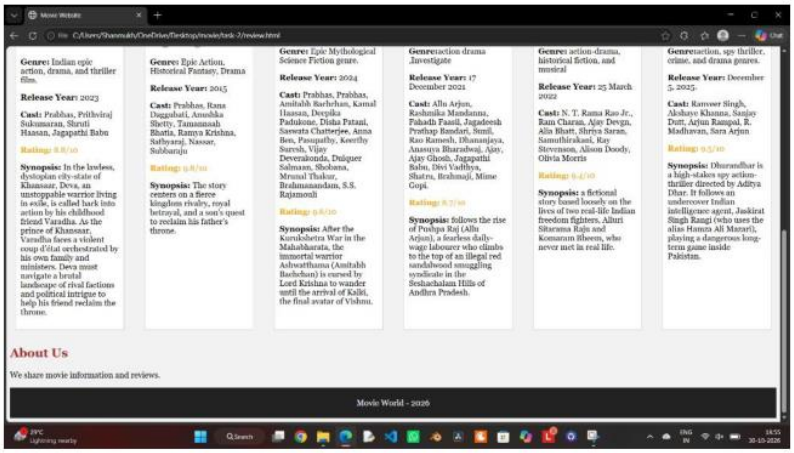

#### CSS Code Explanation

- The body selector sets the page background and font.
- The h1 selector gives the main heading a dark background, white text, centered text, and padding.
- The navigation class gives the navigation bar a dark background and spacing.
- The a selector styles the navigation links and removes their underline.
- The movies class uses display:flex to place movie cards in a row and gap to create space between them.
- The movie class creates a card using a white background, border, padding, width, and margin.
- The movie image rule controls the poster size.

- The rate class changes the appearance of movie ratings.
- The footer rule styles the bottom section with a dark background and white text.

## 3. Output – Original Screenshot

# TASK 2: Student Dashboard

## 1. Aim

The aim is to create a Student Dashboard using HTML and CSS. The dashboard displays student details, semester results, attendance, exam schedule, and announcements.

## 2. Source Code Explanation

### HTML Code Explanation

- The head section contains the character settings, viewport settings, page title, and CSS file connection.
- The main heading displays Student Dashboard.
- The navigation bar contains Home, Results, Attendance, and Exams links.
- The Student Details section displays the student's name, course, and semester.
- The Semester Results section uses a table to display subjects and marks.
- The table uses tr for rows, th for heading cells, and td for normal data cells.
- The Attendance section displays the attendance percentage.
- The Exam Schedule section lists the examination dates for the subjects.
- The Announcements section displays important examination and college notices.
- The footer displays the university name and year.

### CSS Code Explanation

- The body rule gives the dashboard a light background, sets the font, and centers the text.
- The h1 rule styles the dashboard heading with a colored background, white text, padding, and rounded corners.
- The h2 rule changes the section-heading color.
- The paragraph rule creates white information boxes with padding, margin, width, and rounded corners.
- The navigation class styles the navigation bar.
- The link rule makes navigation links white and removes the underline.
- The table rules style the table, headings, borders, and cell spacing.
- The announcement class styles the announcement box.

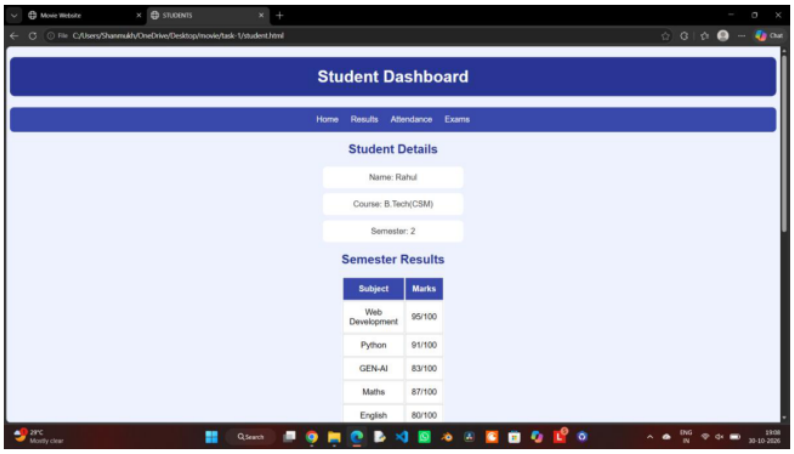

## 3. Output – Original Screenshot

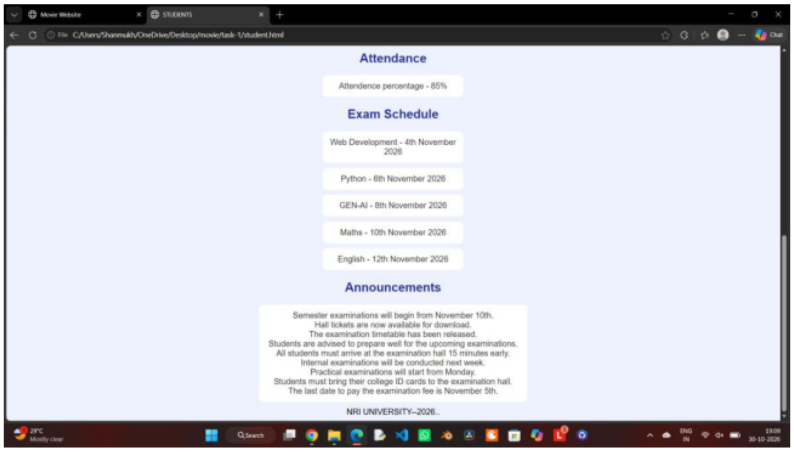

```
    color: white;
}

td, th{
    border: 1px solid #cccccc;
    padding: 12px;
}

.sem{
    background-color: white;
    color: #333333;
    padding: 12px;
    margin: 10px auto;
    width: 500px;
    border-radius: 8px;
}
```

# TASK 3: WELLCORE Center Website

## 1. Aim

The aim is to create a simple wellness website using HTML and CSS. The website provides information about yoga, meditation, class schedules, and membership plans.

## 2. Source Code Explanation

### HTML Code Explanation

- The head section contains the title and connects the CSS file.
- The main heading displays WELLCORE Center.
- The navigation bar contains Home, Yoga, Meditation, Classes, and Contact links.
- The Home section welcomes users and displays an image.
- The Yoga section gives a short description and displays a yoga image.
- The Meditation section explains the purpose of meditation.
- The Class Schedule section lists Morning Yoga, Meditation, and Evening Yoga timings.
- The Membership Plans section displays the monthly plan and contact information.

### CSS Code Explanation

- The body rule sets a light background, font, centered text, and removes the default margin.
- The h1 rule creates a green header with white text and padding.
- The navigation class gives the navigation bar a green background and padding.
- The link rule makes the navigation links white and removes their underline.
- The div rule adds spacing around webpage sections.
- The h2 rule changes the section-heading color.
- The paragraph rule creates white content boxes with width, padding, margin, and rounded corners.
- The image rule adds rounded corners and a border to images.
- The button rule styles a button with a green background, white text, padding, and rounded corners.

## 3. Output – Original Screenshot

```
    color: #386641;
}

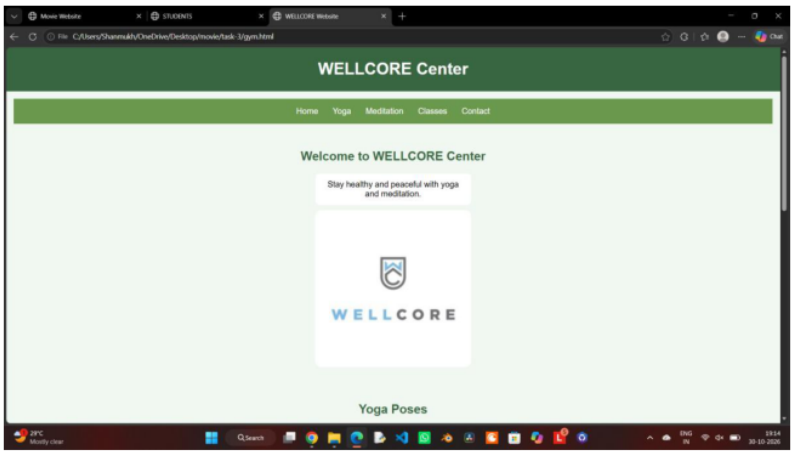

p {
    background-color: white;
    width: 280px;
    padding: 12px;
    margin: 10px auto;
    border-radius: 8px;

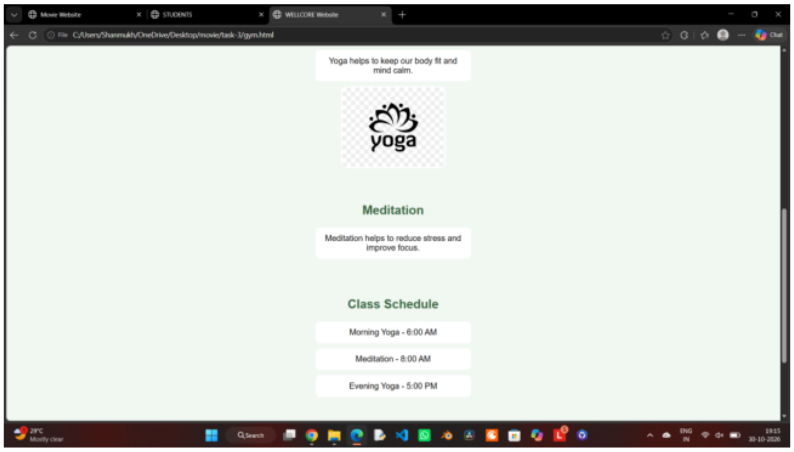

}

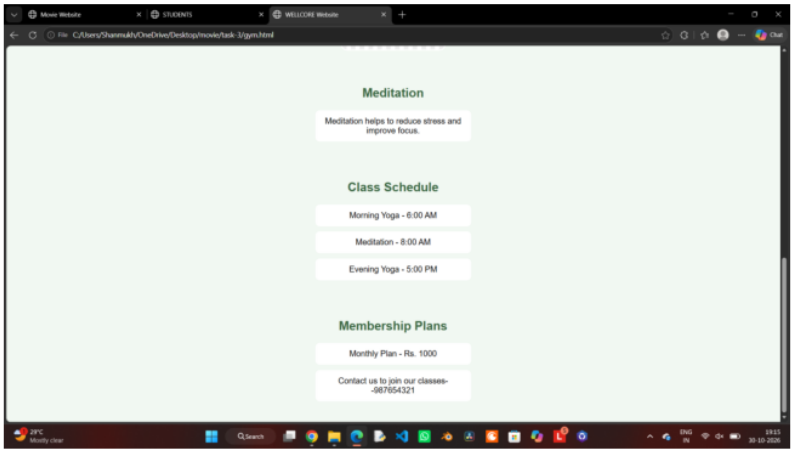

img {
    border-radius: 12px;
    border: 3px solid white;
}

button {
    background-color: #6a994e;
    color: white;
    padding: 10px 20px;
    border: none;
    border-radius: 5px;
}
```
